- (Original) A glazing unit for mounting in a support structure comprising: at least
 one external monolithic glazing element layer bonded to at least one polymer
 element layer having embedded therein at least one member of a mechanical
 fastening means for fixing said unit to the support structure.
- 2. (Original) The glazing unit of claim 1 wherein said mechanical fastening means consists of a fastening mechanism having an interacting male member and a female member.
- 3. (Original) The glazing unit of claim 2 wherein said male member is embedded in an ionomer polymer layer and protrudes for connection to the support structure.
- 4. (Original) The glazing unit of claim 2 wherein said female member is embedded in an ionomer polymer element layer and is connectable to a male member passing through a support structure.
- 5. (Original) The glazing unit of claim 2 wherein said fastening mechanism consists of an interacting bolt and nut arrangement.
- 6. (Original) The combination of the glazing unit of claim 1 and a support frame.
- 7. (Withdrawn)
- 8. (Original) The glazing unit of claim 1 wherein said laminate is a double glazing unit comprising an external monolithic glazing element layer and an internal glazing element layer bonded by an ionomer polymer interlayer having embedded therein at least one mechanical fastening means for fixing and unit to a support structure.
